

Patent Claims

1 1. A method for determining a steering torque acting
2 when a steering wheel is activated in motor vehicles,
3 in particular in motor vehicles which are driven on
4 steered wheels, characterized in that the interference
5 torque component ($M_{\text{stör}}$), based on interfering
6 influences, of the steering torque (M_{ist}) is
7 determined and the steering torque (M_{ist}) with reduced
8 interference force is generated by means of a torque
9 generator (108, 208).

1 2. The method as claimed in claim 1, characterized in
2 that the steering torque (M_{ist}) with reduced
3 interference force is determined in such a way that it
4 is at least largely free of interference force.

1 3. The method as claimed in claim 1 or 2,
2 characterized in that the interference torque component
3 ($M_{\text{stör}}$) is determined from wheel forces (101, 102,
4 103, 201).

1 4. The method as claimed in claim 3, characterized in
2 that the interference torque ($M_{\text{stör}}$) is determined
3 from at least one of the forces comprising wheel
4 circumferential forces (101), wheel normal forces (102)
5 and wheel lateral forces (103).

1 5. The method as claimed in one of claims 3 or 4,
2 characterized in that the wheel forces (101, 102, 103,
3 201) are determined using an observer.

1 6. The method as claimed in one of claims 3 to 5,
2 characterized in that the wheel forces (101, 102, 103,
3 201) are determined using variables which are measured

4 by means of sensors or which are determined in the
5 vehicle, in particular variables from the set
6 comprising steering angle, yaw rate, vehicle speed,
7 lateral acceleration, wheel speeds, wheel brake
8 pressures and drive torque.

1 7. The method as claimed in one of the preceding
2 claims, characterized in that the interference torque
3 component ($M_{\text{stör}}$) is determined from wheel forces
4 (101, 102, 103, 201) and measured variables, wherein in
5 particular a model, preferably an observer, or at least
6 one characteristic diagram is used for this purpose.

1 8. The method as claimed in one of claims 2 to 7,
2 characterized in that steering torque (M_{ist}) which
3 acts on the steering wheel is reduced by the
4 interference torque.

1 9. The method as claimed in one of the preceding
2 claims, characterized in that a setpoint steering
3 torque (M_{soll}) which is free of influence from an
4 interference force is determined from variables.

1 10. The method as claimed in claim 9, characterized in
2 that the setpoint steering torque (M_{soll}) which is
3 free of influence from an interference force is
4 determined by means of a model, in particular an
5 observer, wherein in particular variables from the set
6 of steering angle, yaw rate, vehicle speed, lateral
7 acceleration, wheel speeds, wheel brake pressures and
8 drive torque are used.

1 11. The method as claimed in one of claims 9 or 10,
2 characterized in that a steering torque which is to be
3 generated and an interference torque component ($M_{\text{stör}}$)
4 for generating the steering torque are fed to the
5 torque generator (108, 208).

1 12. The method as claimed in one of the preceding
2 claims, characterized in that, in order to determine
3 the interference torque component ($M_{\text{stör}}$), a driving
4 situation is derived from variables and the
5 interference torques ($M_{\text{stör}}$) are derived as a function
6 of the driving situation.

1 13. The method as claimed in one of the preceding
2 claims, characterized in that an actual torque (M_{ist})
3 of the steering torque is sensed and a steering torque
4 which is free of interference torque is applied on the
5 basis of the actual torque (M_{ist}) and the interference
6 torque component ($M_{\text{stör}}$) which is determined.

1 14. The method as claimed in one of claims 1 to 12,
2 characterized in that an actual torque (M_{ist}) of the
3 steering torque is sensed and a steering torque (M_{ist})
4 which is free of interference torque is applied on the
5 basis of the actual torque (M_{ist}) and the setpoint
6 torque (M_{soll}) which is free of influence from an
7 interference torque.

1 15. The method as claimed in claim 13 or 14,
2 characterized in that stochastic oscillation
3 excitations of steered wheels are determined as
4 interference torque components ($M_{\text{stör}}$).

1 16. A motor vehicle having a steering wheel for the
2 driver to predefine a steering angle, and a torque
3 generator for applying a steering torque to the
4 steering wheel, characterized in that the steering
5 torque is determined as claimed in one of the preceding
6 claims.
